Widths reported are drill indicated core length. True widths are estimated at 75% to 80% of core lengths for holes OKD-20 to OKD-35 and unknown or not estimated for holes OKD-01 through OKD-19.

Average grades are calculated with un-capped gold assays, as insufficient drilling has been completed to determine capping levels for higher grade intercepts.

All holes are drilled at an angle of 60 degrees to the horizontal.
